DETAILED ACTION

Specification

The disclosure is objected to because:

This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

The specification does not contain a Brief Description of the Drawings section. See MPEP 608.01(f). Appropriate correction is required.

The specification on page 9, line 26, contains an obvious error viz. the term allylhydrazine should be deleted and replaced with allylamine.

Allylhydrazine is the product of the reaction, not a starting material. Appropriate correction is required.

Applicant's assistance is respectfully requested in correcting any other minor errors which may be present in the specification.

Claim Objections

Claim 13 is objected to because of the following informalities: in step (b) of the claim, the term "step a" should instead be "step (a)" in order to maintain a consistent terminology throughout the text. Appropriate correction is required.

Claim 21 is objected to because of the following informalities: the first instance of the term "step (a)" should instead be "step (c)." This appears to be a typographical error. Appropriate correction is required.

Applicant's assistance is respectfully requested in correcting any other minor errors which may be present in the claims.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 28 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "approximately" is a relative term which renders the claim indefinite. The term is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Allowable Subject Matter

Claims 14-27 are objected to as being dependent upon a base claim which has been objected to, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter:

The closest prior art appears to be *Journal of the American Chemical Society*, 1955, Vol. 77, p. 3131, cited by applicant in the IDS, which teaches the synthesis of allylhydrazine from allylamine and chloramine (experimental

section). The procedure followed is described to be similar to that detailed in *Journal of the American Chemical Society*, 1954, Vol. 76, p. 4869-4871 (page 4871, first full paragraph) for the synthesis of alkylhydrazines.

The cited prior art neither teaches nor suggests the instant process. Nor would it have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of the prior art in order to arrive at those of the instant invention. There is no motivation to do so.
